Lab 5.2: Electric Boogaloo HTML Style
Build a Simple Website

Purpose: Build a basic website using the basics of HTML, use the basic html calls, and see how a website is generally constructed.

Task: Build a website for whatever topic you want. There are a few requirements that your webpage needs to have, but other than that it up to you.

Requirements:
- At least 4 colors used
- Get user input for 4 numbers and perform at least two operations (+, -, etc.)
- Output the result of the operation on the webpage
- Have a table and make it have borders using the style section
    - Table needs to have at least 5 values plus headers for each
    - Also needs to have 3 columns in each row
- Have metadata for author, date and purpose
- Have a link to a website
- Insert the picture below and don't forget to cite it (Ask Alan about the significance of this):
  https://imgur.com/gallery/t0MRiAf
- Comment you code (Why? Because comments are apparently good)
- Link to another html file

Rubric:
-1 for each requirement missing
-2 for html not running correctly
-2 no comments

Turn in by 11:59pm on Tuesday, no exceptions.
