

# MATH 200 – Discrete Mathematics

## Final

### Spring 2020

Tl;dr – redo your homework for points or don't and take your grade as-is. Email me to let me know (or to turn in your stuff!) by May 11<sup>th</sup>.

Since the normal way of approaching the final for this course has been disrupted, I wanted to create a final that would capture the essence of what I want to do with any of my finals – provide a chance for students to either improve their grade, or choose to not focus on my course if they are satisfied with their grade at the moment of the final.

Currently, Matt and I are planning on having your grades for the final project and last homework (both due Monday, April 27<sup>th</sup>) by May 1<sup>st</sup> so that you can have all of your grade points in order to decide whether or not to attempt to revise your homework for partial credit added to those homework grades. Homework in the class is worth 25%, so this revision could be a significant boost to your grade. Note – this does not allow you to redo the midterm or the paper project, just the homework assignments.

#### **Choose one:**

Redo any of the homework that you scored **less than 8** on for additional credit. You may turn in as many of these homework assignments as you would like.

- OR -

Do nothing, and accept your grade as-is.

For either choice, I would very much appreciate an **email indicating your intent** that serves as you checking in with me. Just make sure that your email and/or your work is in by **noon on May 11<sup>th</sup>**. I cannot take any late submissions for this final. Earlier submissions are better.

**Due date: May 11<sup>th</sup>, noon, via email.**
